SUMMARY

Results-oriented **React/TypeScript engineer with 14+ years full-stack experience**, specializing in high-performance user interfaces, event-driven architectures, and technical team leadership. Led frontend teams building complex, multi-step digital platforms handling high-volume concurrent interactions. Proven track record architecting async-first UI components and React Query-based state management for low-latency, data-intensive applications. Strong foundation in reactive server patterns and modern DevOps; rapidly adopt emerging technologies and best practices.

EXPERIENCE

Hastings Direct, Senior Software Engineer — Guidewire Platform Modernisation Lead

Jun 2020 – Present

Team Leadership & Frontend Architecture

Led a team of 4 frontend engineers on the Hub journey (Total Loss and Repair claims platform), establishing TypeScript adoption, 100%-test-coverage discipline, and code-quality standards across the React codebase. Mentored junior engineers on React best practices, custom hooks patterns, and incremental TypeScript adoption.

Hub Journey UI — React/TypeScript Digital Claims Platform

- Architected the **Hub journey UI**—a complex, multi-step claims experience supporting parallel claim submission and data-heavy rendering—handling high-volume concurrent workflows via optimized **React Query** state management, custom hooks for business logic extraction, and async-first component design patterns (non-blocking request/response flows, graceful error recovery).
- Implemented **100%-test-coverage discipline** across Jest, React Testing Library, and Playwright end-to-end tests; champion code reviews and architecture discussions.
- Built **structured web-analytics event-tracking layer** (custom event emitter feeding GTM-style data layer) tracking journey start/reset, form input, error states, and ecommerce-style events; integrated **Microsoft Application Insights** telemetry.
- Delivered full **punchout-style multi-brand embedding** (Hastings Direct, Insure Pink, Peoples Choice) supporting tenant isolation and consistent UX across brands.

API Gateway & Backend Integration

- Designed and maintained the **Azure API Management gateway** fronting Guidewire ClaimCenter (Guidewire Pattern 4 middleware): JSON-RPC ↔ REST transformation policies, JWT/OAuth validation across three consumer brands, kill-switch circuit-breaker for safe offline suspension.
- Architected **high-performance async data pipelines** (backend: Spring Boot microservices with CompletableFuture-based parallelization) reducing quote-orchestration latency by **90% (22s → 2.2s)**; translated principle to frontend: ensure UI updates never block critical user flows (debouncing, memoization, hook dependency optimization).
- Built **automatic rerate logic** in Guidewire PolicyCenter detecting stale/expired aggregator quotes on retrieval, transparently re-pricing via PolicyCenter's rating engine before presenting to underwriter/customer.
- Designed **concurrent multi-version rating step** pricing every competing brand/scheme quote in parallel through PolicyCenter's rating engine, followed by automated underwriting-referral evaluation.
- Built **Total Loss valuation service** (Gosu handlers + Java mappers) consumed by the digital claims platform, calculating settlement figures and handling accept/reject workflows end-to-end with automated payment triggering.

State Management & Data Architecture

- Owned **state management architecture** across React Query (async API state) + React Context API (UI-scoped state), demonstrating intentional use of multiple patterns for different concerns.
- Implemented **event-driven telemetry** integrating Spring Boot microservices with Azure EventHub, routing critical system data to Snowflake while accelerating feature delivery using GitHub Copilot.

LV=, Specialist Integration Engineer

Nov 2019 – May 2020

- Designed and built **API integrations** (REST and SOAP) between core policy management systems and external aggregator platforms, handling complex data transformation and business rule enforcement.
- Implemented end-to-end integrations across billing and policy systems in **Java and Gosu**, creating robust API specifications and Technical Design Documents.

EY, Technical Manager

Nov 2014 – Nov 2019

- Delivered full-suite **Guidewire implementation** (PolicyCenter, BillingCenter, ClaimCenter, ContactManager v8–10.x) for ALFA Insurance Corporation enabling management of millions of customer insurance details.
- Integrated five critical downstream systems (LexisNexis, tISO ClaimSearch) into core platforms; independently developed **JavaScript automation tools** eliminating 15 minutes of manual QA data creation per test case.
- Owned automatic bulk invoice processing, FNOL creation, ISO integration, and SIMSOL delivery.

IGATE, Senior Software Engineer

Jan 2014 – Nov 2014

- Gathered client requirements and implemented cross-cutting solutions using Spring MVC, PL/SQL, JBoss, and AWS S3.

Tech Mahindra, Software Engineer

Jun 2011 – Dec 2013

- Early software engineering foundation role.

EDUCATION

Anna University

Bachelor of Technology (B.Tech.) • Information Technology (2007–2011)

SKILLS

Frontend: TypeScript, React (16–19), HTML/CSS, React Query, React Router, Context API, Custom Hooks, Styled Components, Bootstrap 5

Testing & Quality: Jest, React Testing Library, Playwright, Sonar, 100%-coverage gates, code review discipline

Backend & Async: Java (8–21), Spring Boot, microservices, event-driven architecture, CompletableFuture parallelization, async/await patterns; familiarizing with Node.js and reactive server architectures (async patterns, WebSockets, event-driven streams)

DevOps & Tooling: Azure (APIM, EventHub, Blob Storage), GitHub Actions, Azure DevOps, Jira, Git, npm/Yarn, Webpack 5, Husky, ESLint/Prettier

Data & Analytics: GTM-style event tracking, Application Insights, structured logging, correlation-ID tracing

Grid & Data Viz: Familiar with high-performance grid libraries (AG Grid community features); proven ability to rapidly adopt new data-heavy UI frameworks; experience optimizing complex data views for high-throughput real-time

updates

Process: Agile/Scrum, test-driven development, architectural design, technical mentorship, DevOps culture

LICENSES & CERTIFICATIONS

- Guidewire Certified Specialist – InsuranceSuite Integration (Guidewire Software, Dec 2023)
- Specialist Certification – InsuranceSuite 10.0 Integration (Guidewire Software, Aug 2019)
- Microsoft Certified: Azure Fundamentals (AZ-900 & DP-900) (Microsoft, Dec 2022)
- Java Foundations Professional Certificate (JetBrains, Dec 2025)
- Docker Foundations Professional Certificate (Docker, Inc., Jul 2025)
